Professor Linus Pauling
California Institute of Technology
Pasadena, California

Dear Linus:

It was good to hear that the studies you and Campbell are making are turning out so favorably and the number of useful antigen is increasing. I only wish I could send you a gram of type One substance but this is impossible. I am, though, sending you under separate cover a few 10th's of a gram of a product prepared by Dr. John W. Palmer of the Biological Division of E. R. Squibb and Sons, which I have every reason to think is as good as can be obtained.

Hoping this will suffice and with all good wishes,

Cordially yours,

Michael Heidelberger
